PROFESSIONAL SUMMARY

Software Engineer specializing in full-stack application development, enterprise systems, government platforms, GIS solutions, and workflow automation.

Experienced in designing scalable architectures, developing modern web applications with Laravel, SvelteKit, TypeScript, and Node.js, and implementing REST API integrations, geospatial technologies, and DevOps practices using Docker and CI/CD pipelines.

Passionate about leveraging automation, AI integration, and Retrieval-Augmented Generation (RAG) technologies to build efficient, reliable, and maintainable software solutions that solve real-world business problems.

EDUCATION

STMIK Mardira Indonesia (2024 – Present)
Bachelor of Informatics Engineering (Working Professional Program)
Final-year student – part-time/blended learning program designed for working professionals

AMIK-YPAT Purwakarta (2021 - 2024)
Diploma III in Informatics and Computer Management
GPA: 3.62/4.00

WORK EXPERIENCE

PT Pratama Solusi Teknologi (May 2023 - Present)
Web Developer - Full-Time

- Developed a Laravel & MySQL-based technical approval system (SiPerintis) for the Purwakarta District Environmental Agency, including the integration of regional APIs and Google reCAPTCHA to improve system security.
- Built and managed the official website of the Environment Agency with the integration of BMKG API and regional data for the presentation of environmental information publicly.
- Developed the Purwakartakab frontend portal using SvelteKit & TypeScript with API integration and OpenLayers-based spatial data visualization.
- Developed the company's internal ERP system to support business processes using SvelteKit, Drizzle ORM, MySQL, and Tailwind CSS.
- Built an AI-powered Blog Content Engine for the company's internal web profile platform using n8n, Qdrant Vector Database (RAG), and Google Gemini, automating SEO-oriented B2B article generation based on company product documentation and knowledge bases.
- Designed and implemented automated content validation, duplicate detection, self-healing AI workflows, REST API publishing, and Retrieval-Augmented Generation (RAG) pipelines to ensure factual and high-quality content generation.
- Building a One Map Information System for Purwakarta Regency based on Laravel and OpenLayers for the management and visualization of geographic data.
- Developed various company profile websites and local government information systems based on Laravel and CodeIgniter.

Diskominfo Purwakarta Regency (March 2023 – May 2023)
Web Application Developer - Intern

- Developing the SIPEDO Information System for the Purwakarta Regency Diskominfo using CodeIgniter 4 and MySQL, with a Bootstrap-based interface and JavaScript to support the management and presentation of information digitally.

PROJECTS

Supplyra ERP (Personal Project) – github.com/mikeu-dev/supplyra

- Designed and developed a modular web-based ERP system for integrated business management, covering project management, finance, HR, and reporting modules.
- Built with SvelteKit 2, TypeScript, and Tailwind CSS using a modern component-based architecture for scalability and maintainability.
- Implemented backend services using Node.js, PostgreSQL, and Drizzle ORM with Redis caching and BullMQ for background job processing.
- Developed role-based access control (RBAC), audit logging, and activity tracking for enterprise-level system security and governance.
- Integrated real-time features including notifications using Server-Sent Events (SSE) and optimized system performance for multi-user usage.
- Designed infrastructure-ready architecture supporting Docker containerization and CI/CD pipeline deployment via GitHub Actions.

Kerjao (Personal Projects) - kerjao-id.vercel.app

- Developed a web platform for digital content management with a stateless architecture approach to reduce backend complexity and improve deployment efficiency.
- Built a web application using SvelteKit with a focus on lightweight performance, scalability, and ease of use.
- Designed with scalability and SaaS readiness in mind.

CloudLab Environment (Personal Projects) - github.com/mikeu-dev/cloud-lab

- Built on-premises cloud environments using Docker, Nginx, Prometheus, and Grafana for production system simulations.
- Implemented CI/CD pipelines using GitHub Actions for built and deployment automation.
- Simulate deployment production using Kubernetes.

Tikdrop (Personal Project) - www.tikdrop.my.id

- Developed a high-performance Progressive Web Application (PWA) using Next.js 16 (App Router + Turbopack) with focus on scalability, performance optimization, and modern frontend architecture.
- Designed and implemented a modular system architecture with Firebase (Auth & Firestore) for user data synchronization and Zustand for state management.
- Built a responsive and installable web application with multilingual support (i18n), smooth UI interactions using Framer Motion, and accessibility compliance (WCAG principles).
- Implemented structured client-side processing and optimized media handling workflows for performance and responsiveness.
- Optimized application performance and user experience for cross-device usage and production-grade deployment.

Geovara (Personal Project) - geovara.vercel.app

- Developed a stateless geospatial engineering web-based platform for professional GeoJSON processing and editing.
- Implemented URL-driven architecture with LZW compression for full synchronization of spatial data and map state without a backend.
- Optimize rendering performance using Web Workers and VectorImageLayer to handle large GeoJSON datasets responsively (60fps).
- Built a spatial intelligence layer using Turf.js for real-time geometry analysis (buffer, centroid, intersection, as well as area & length calculations).
- Supports professional GIS standards such as multi-projection (EPSG:4326 & EPSG:3857), GeoJSON data validation with Zod, and command pattern-based undo/redo systems.

CERTIFICATE

LKP BEC – INDONESIA (September 2024)

Web Programming (HTML, CSS, JavaScript, PHP)

EXPERTISE

Technical Expertise

- Frontend: SvelteKit, Next.js, JavaScript, TypeScript, Tailwind CSS, Bootstrap
- Backend: PHP (Laravel, CodeIgniter), Node.js
- Database: MySQL, PostgreSQL, SQL Server, Qdrant Vector Database
- Automation & AI: n8n, Retrieval-Augmented Generation (RAG), Google Gemini API, AI Workflow Automation
- DevOps & Tools: Docker, Git, GitHub Actions, Nginx
- GIS & Spatial Technologies: OpenLayers, Leaflet, Google Maps
- API & Integration: REST API Development, Third-Party API Integration

Non-Technical Expertise

- Problem Solving
- System Analysis & Solution Design
- Technical Leadership
- Cross-Functional Collaboration
- Communication
